

Helpful: Financial Organizer

A comprehensive iPhone solution designed to simplify student life through integrated financial tracking, and document management

The Problem We're Solving

Student Challenges

Today's students juggle multiple responsibilities: managing tight budgets, organizing countless academic documents, tracking complex schedules, and maintaining connections with peers and instructors.

Current solutions are fragmented—requiring students to switch between multiple apps, leading to disorganization and stress.

Financial Confusion

Students struggle to track spending across multiple categories without clear visibility

Document Chaos

Important papers get lost in backpacks, emails, and folders

System Overview: All-in-One Solution

Helpful is a standalone iOS application that unifies financial management, document organization, academic planning, and social connectivity into one seamless experience.

Budget Management

Track spending across categories with visual charts and insights that help students understand where their money goes

Document Scanning

Capture and organize homework, notes, and important papers using the device camera with automatic categorization

Target Users

Primary: HT Students

College students who need to manage finances on tight budgets while juggling academic responsibilities. They require quick access to documents, class schedules, and peer connections—all from their iPhone.

- Tech-comfortable but time-constrained
- Managing limited financial resources
- Need organizational support

Key Functional Requirements

1. Budget Creation & Tracking

01

Category Setup

Students create custom spending categories (food, books, entertainment, transportation) tailored to their lifestyle

02

Expense Entry

Quick input interface allows students to log purchases in real-time with minimal friction

03

Visual Analytics

Interactive charts display spending patterns, helping students identify where to cut costs and save money

2. Document Scanning & Organization

Scan

Use device camera to capture papers, receipts, handouts

Categorize

Organize by class, date, or custom tags

Store

Save to cloud with offline access capability

Critical requirement: Scanning and upload must complete within 10-15 seconds to maintain workflow efficiency.

Non-Functional Requirements

1

Performance Standards

App must launch in under 2 seconds from cold start. All navigation between features should feel instantaneous, with maximum load times of 1 second for transitions.

Document scanning and cloud upload: 10-15 seconds maximum, with progress indicators to maintain user confidence during processing.

2

Security & Privacy

All data transfers use end-to-end encryption to protect sensitive financial and academic information. User authentication through secure Google OAuth integration.

Compliance: Full adherence to FERPA regulations for educational records and student privacy protection.

3

Reliability & Quality

Offline functionality ensures students can access critical documents and schedules without internet connectivity. Cloud sync occurs automatically when connection is restored.

Intuitive interface design requiring minimal learning curve—new users guided through setup with contextual tips and an optional onboarding tour.

System Architecture Overview

Technology Stack

Frontend

- Native iOS (Swift)
- iPhone & iPad compatible
- Responsive dashboard UI
- Camera integration

Backend

- Firebase for authentication
- Cloud storage for documents
- Real-time data sync
- Secure API endpoints

Security

- Encrypted data transfer
- OAuth 2.0 authentication
- FERPA compliant
- Local device encryption

System Architecture Diagram

The Helpful app's architecture is designed for a robust, secure, and responsive user experience, featuring distinct layers for clear separation of concerns and efficient data flow.
