STUDENT FINANCE EDUCATION

Beginner Financial Responsibility

Empowering Students for a Secure Future

A comprehensive platform designed to equip middle and high school students with the foundational money management skills they need — before they need them most.

Made with GAMMA

CHAPTER 1 PROBLEM STATEMENT

The Problem: Why Beginner Financial Responsibility Matters

Millions of students graduate without ever learning how to budget, save, or manage credit. This gap in foundational financial literacy leads to **poor money management**, mounting debt, and long-term financial insecurity.

Financial stress doesn't just affect wallets — it significantly impacts **academic performance**, mental health, and overall wellbeing during critical developmental years.

Target Users: Middle and high school students preparing for real-world financial independence.

Helpful App: Complete Feature Overview

User Authentication & Onboarding

Secure login with Firebase, guided setup for quick starts, and persistent access.

Budget & Expense Tracking

Set monthly budgets, categorize spending, and visualize progress with intuitive indicators.

Transaction Management

Easily log purchases, attach receipt photos, and manage entries with swipe-to-delete.

Savings Goals

Define target amounts and deadlines, tracking progress with fun emoji icons.

Document Storage & Organization

Securely upload and store important PDFs and images with cloud access.

Academic Tools

Utilize a GPA calculator and semester cost estimator for smart academic planning.

Opportunity Discovery

Find scholarships and internships with an engaging swipe interface and real listings.

Profile & Settings

Customize personal information, manage notifications, toggle dark mode, and sign out.

Cloud Backend & Real-Time Updates

Firebase Firestore ensures real-time data synchronization across all your devices.

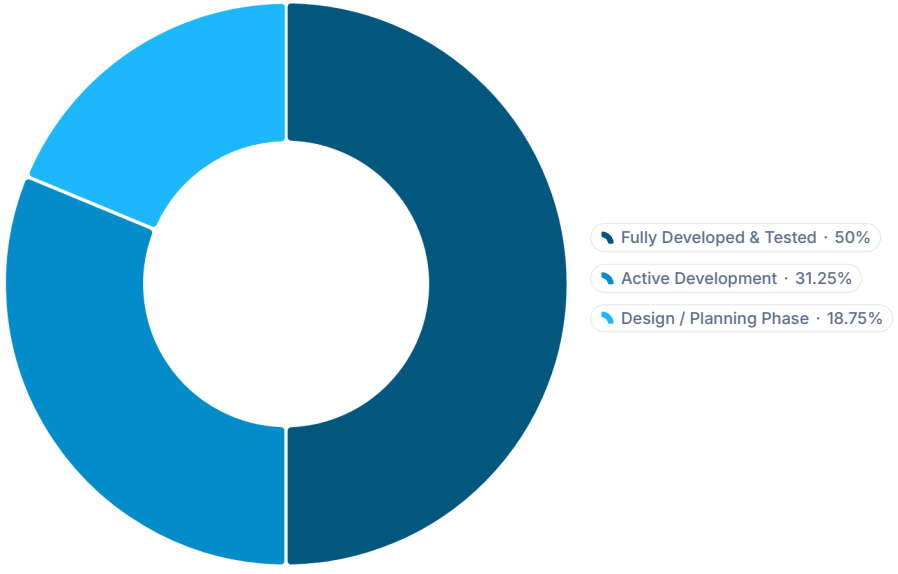
Completed vs. Planned Features



01

40% — Fully Developed

Budgeting tool, credit module, and loan simulator tested and deployed.

02

25% — In Active Development

Emergency fund planner and goal dashboard being built.

03

15% — Design & Planning

Personalized tips and mobile enhancements in design phase.

Challenges Encountered & Solutions Implemented

🔴 Poor Data Synchronization Between Budgets and Transactions

Solution: The issue was resolved by centralizing all financial updates through a shared service layer. Budget totals are now automatically recalculated whenever a transaction is added or removed. This ensured data consistency and eliminated mismatches between budgets and transaction records.

🔴 Overcomplicated App Navigation and User Flow

Solution: The navigation was redesigned using a tab-based layout with clear icons and labels. Frequently used features were placed directly on the home screen with quick-access cards, reducing the number of taps needed to perform common actions.

🔴 Inconsistent Authentication State Handling

Solution: The authentication logic was centralized into a single authentication ViewModel that manages login state, onboarding completion, and sign-out behavior. The app now reacts to authentication changes in one place and routes users correctly based on their current status.
