13. 2.7 Things we're guessing or waiting on

3. What the App Can Do

14. 3.1 Sign up and log in
15. 3.1.1 What it does and how important it is
16. 3.1.2 What happens when you use it
17. 3.1.3 What it must be able to do
18. 3.2 Make and track a budget
19. 3.2.1 What it does and how important it is
20. 3.2.2 What happens when you use it
21. 3.2.3 What it must be able to do
22. 3.3 Scan and save school papers
23. 3.3.1 What it does and how important it is
24. 3.3.2 What happens when you use it
25. 3.3.3 What it must be able to do
26. 3.4 Keep track of classes
27. 3.4.1 What it does and how important it is
28. 3.4.2 What happens when you use it
29. 3.4.3 What it must be able to do
30. 3.4.4 Connect with classmates and teachers
31. 3.5.1 What it does and how important it is
32. 3.5.2 What happens when you use it
33. 3.5.3 What it must be able to do

4. How It Talks to Devices

34. 4.1 What the screens look like
35. 4.2 What hardware does it use
36. 4.3 What other software does it use
37. 4.4 How it sends and gets info

5. Other Important Things

38. 5.1 How fast it should be
39. 5.2 How safe is it
40. 5.3 How it keeps info private
41. 5.4 How good the app should be
42. **Extra Rules and Needs**

Appendix A: Word List: Words and meanings used in this paper

Appendix B: Diagrams and Pictures that show how the app works

Appendix C: Open Questions: Things we still need to figure out

1. About This App

1.1 What the app is for

Helpful is an iPhone app that helps students keep track of money, save School papers, plan classes, and connect with classmates and teachers

1.2 How this paper is written

We use short titles, simple words, and a clear list of important things that are marked as must-do

1.3 Who should read this

- builders(developers)
- Testers
- teachers

1.4 What the app will do

- Help students make budgets
- Scan and save homework or notes
- Show class schedules
- Let's students connect with friends and teachers

1.5 References

- Canvas
- study. fetch

2. Big Picture

2.1 How this app fits in

It is a stand-alone app for iPhone / iPad, it uses Firebase in Apple tools, but does not connect to school systems

2.2 What the app can do

- It helps students recognize and know where their money is going
- It helps with school papers by keeping them neat and easy to find
- It helps with classes by reminding you of the time and cost
- It helps with friends and teachers by making it easier to connect

2.3 (AGAIN) Who will use it

- Students
- Teachers

2.4 Compatible devices

- IOS

2.5 Tricky Situations

- Making sure budgets are easy to understand and that the setup is seamless
- keeping scanned papers organized without confusion
- making the social environment space feel safe and respectful for students and staff

2.6 Help for users

For new users who are learning about these kinds of applications, our application will take you through a little tour of tips and tricks on how to make your helpful experience seamless and meaningful

2.7 Things to wait for

- Students will want to use their school emails to sign up. There is a time period until that can be used

3. System Features

3.1 Sign up and log in

- Must do: Students can use Google accounts
- Response: Enter email -> Verify -> Enter in

3.1.1 Make and track a budget

- Must do: Add categories, track spending
- Response: Enter numbers -> see chart

3.1.2 Scan and save school papers

- Must do: Use the camera to scan papers
- Response: scan -> save by class or category

3.1.3 Keep track of classes

- Must do: add class times and books
- Response: Enter a schedule/book -> see objective on calendar

3.1.4 Connect with classmates and teachers

- Must do: Search and connect
- Response: Send request -> get added

4. How it talks to devices

4.1 with the screen looks like

- dashboard for money
- scanner screen
- calendar view
- social feed

4.2 What hardware does it use

- Camera for scanning
- device local storage when offline, but Cloud for online

4.3 What other software will it use

- Firebase
- etc…

4.4 How it sends and gets info

- We will try to use encryption for the data transfer

5. Other important things

5.1 Performance

- Absent open in under 2 seconds
- Scanning and uploading should take no longer than 10 to 15 seconds

5.2 Safety Requirements

- I don't want to endanger people
- protect against data loss

5.3 Security Requirements

- Encryption

5.4 Software Quality Attributes

- easy to use
- Reliable
- easy to update and fix

6. Other Requirements

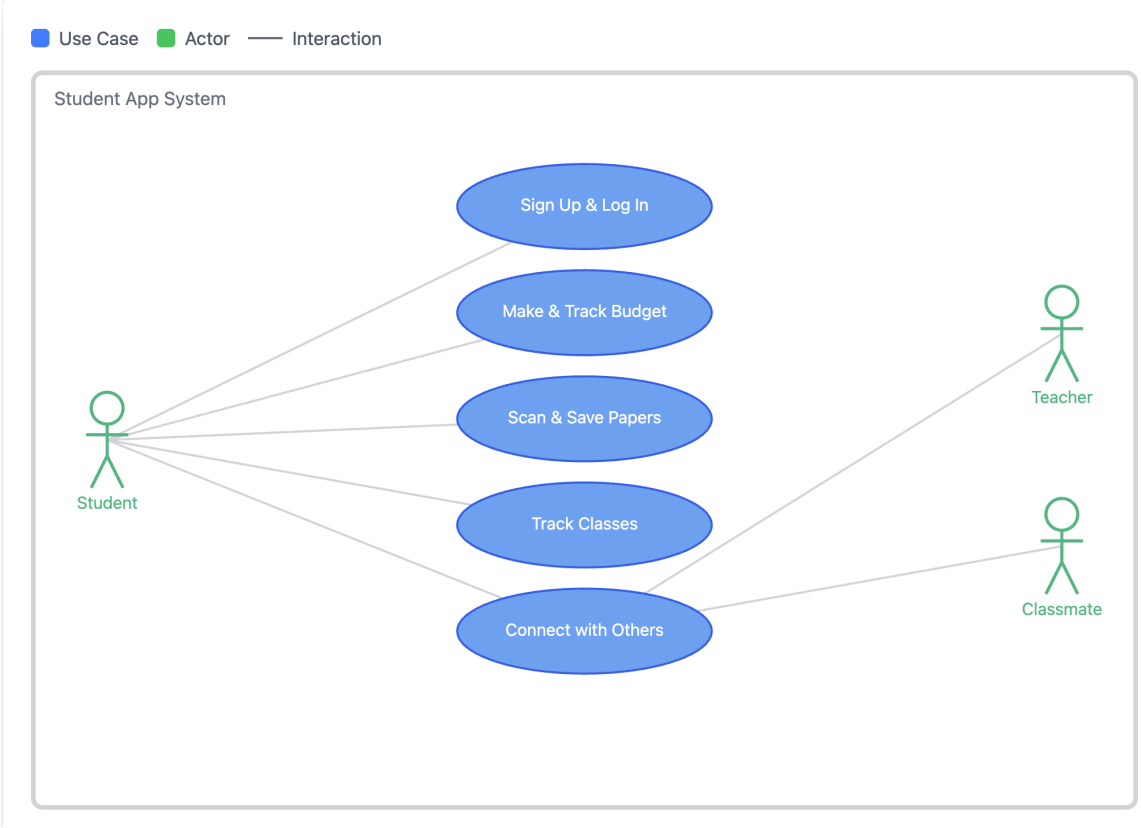
- Need to follow rules and regulations for FERPA

Appendix A: Glossary

- Budget
- email login
- Firebase

Appendix B: Diagrams

Case Diagram:



DFD:

Object-Oriented Class Diagram:

Appendix C: Open Questions

- How should the class planner look? What is the best way for it to be organized? How can we make it more appealing?
- Do you have any outline or designs for the outlay?
- Should we add group chats?
